

Improving patient and user satisfaction for their radiology department was listed as a top priority in a recent survey.¹

Not all system designs achieve equally high levels of patient and user satisfaction.

Enhancing the Patient and User Experience for Radiology

“Most of the time of a CT appointment is taken up by moving the patient rather than scanning... For this reason, facilities like low table height for mobile patients and the ability to correct table position remotely to speed up the process of accurate CT scanning.”²

— *Dr. Mark Kon*
Consultant Radiologist
Bradford Royal Infirmary,
United Kingdom

Designed with impactful ergonomics and intelligent features for improving patient and user satisfaction

Intelligent gantry design

- Flared gantry on front and rear for improved access to patients
- Wide 78 cm bore designed to focus on comfort during the scan process
- Ability for user to initiate the scan from gantry for added patient safety

Enhanced table design

- Table can lower to 33 cm from floor for easy patient loading for all age groups and the physically challenged
- Wide 47 cm table with flat tabletop design

Area finder/laser collimation³

- Laser collimation allows the field of view and scan range set directly on the gantry
- Examinations are performed faster
- Patients are positioned more comfortably

Tech Assist Lateral Slide⁴

- Mechanically move the table right or left, up to 42 mm, to the correct position with the push of a button
- Helps to reduce the risk of injury to the patient and the user

SUREPosition

- Accurately position the patient up-down and right-left from the control room⁵
- Never repeat a scanogram with a new (virtual system) generated scanogram after repositioning
